Hello user, here is your Concov'health's staff writing. Let us explain you how our application works to give you the best experience with our product. We sincerely hope that you will enjoy your new application and use it in the perfect way.
Here we go!

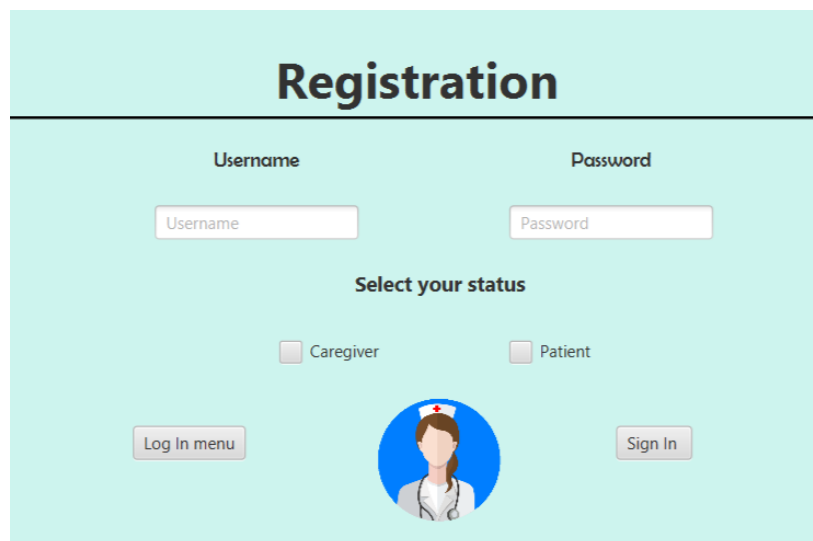

Let separate this explanation in few parts.

First, we will focus on the login page. Let say you do not have an account yet, which we hope will not last longer.

The login page features a large, colorful graphic on the left depicting three stylized human figures in blue, green, and red, forming a heart shape. On the right, there is a light blue background with a purple icon of two people and a lock. Below this icon, the text "Username" is followed by a text input field. Below that, the text "Password" is followed by another text input field. A "Log In" button is positioned below the password field. At the bottom, the text "Don't have an account yet ?" is followed by a "Sign In" button.

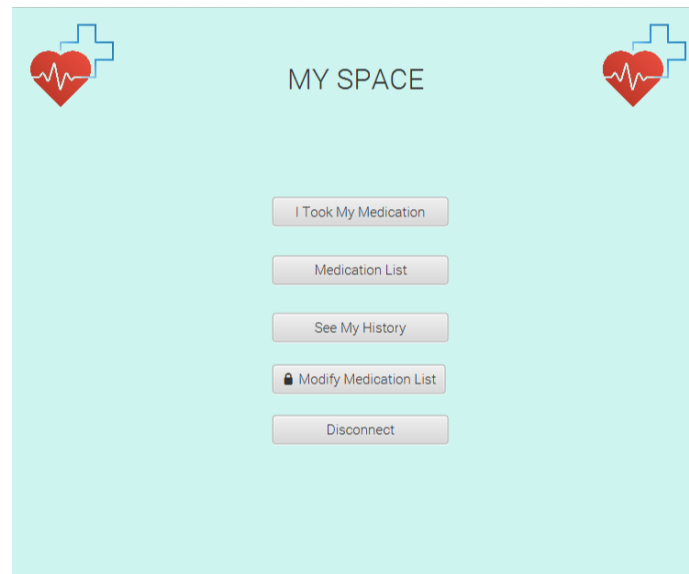

When you start the application, a login page will open. You will have two different options: either you already have an account, and we are thankful for that, either you do not have one and you will have the opportunity to register. Let us focus on the registration. You only need two different information: your username and your password. Once they are created, you will be able to choose your category, either caregiver, either patient. Now, you are in our database! Just login and we will move to the next step.

The registration page has a light blue background with the title "Registration" in bold black text at the top. Below the title, there are two columns: "Username" and "Password". Each column has a corresponding text input field. Below these fields, the text "Select your status" is centered. Underneath, there are two radio button options: "Caregiver" and "Patient". At the bottom, there is a circular icon of a nurse. To the left of the icon is a "Log In menu" button, and to the right is a "Sign In" button.

Now, we will focus on the menu page of the patient. If you are a caregiver, please look farther in the documentation, information for you will be there.

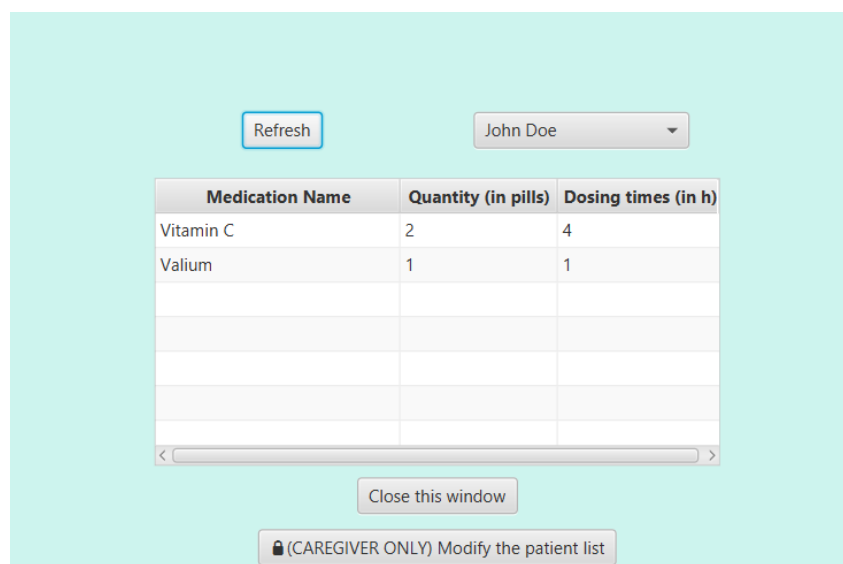

On the menu, you will have different options. First you will be able to valid that you took your medications. Indeed, the application will notify you when you must take it and it is a way to confirm that you did. Then, the second button allows you to see all your medication list in case you do not remember all of it. The last button you can use is see your history. This button is made for you to have a follow-up of your treatment. Do not worry about the button “modify medication list”, it has been created for your care giver. Finally, the last button will disconnect you of the list.

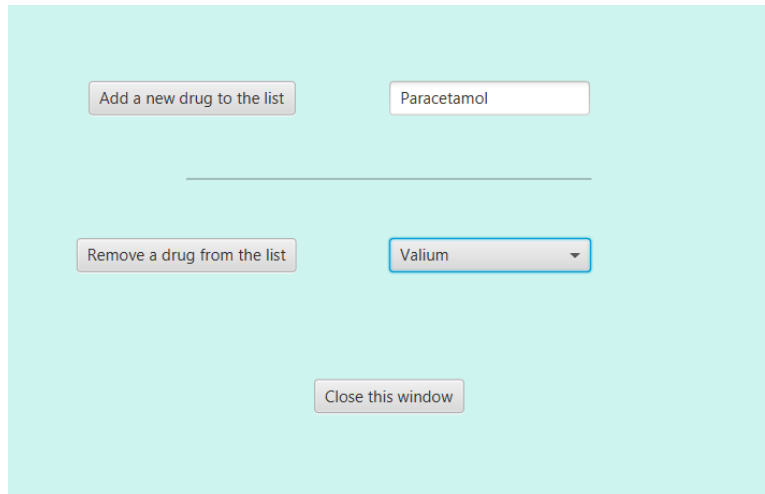

Now caregiver, it is your turn to have your documentation about your menu.

First, notice that on the account of your patient, you will be able to modify his medication list from his menu. Indeed, when you or the patient will click on this button, the application will ask for a personal code that you, as a caregiver, chose. Once you have entered this code, you will be able to modify his medication list.

Now, let us focus on your menu, as caregiver. First, you can see the medication list of your patient. Just select the patient you want, and his list will be displayed.

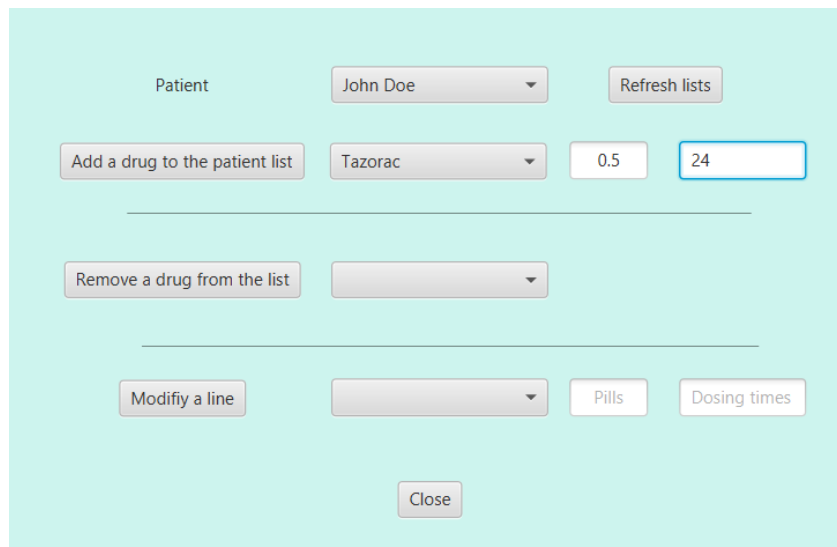

Then, you can see the history of the patient you want. As the previous button, you select a patient, and you will be able to check his history to see if he respects his treatment. Finally, you will have the exact same button, with the same functionalities than the patient one “Modify medication list”. Once again, it will ask for your password for more security and then you will be able to modify the list.

A screenshot of a light blue interface for managing a medication list. It features three main buttons: "Add a new drug to the list" (top left), "Remove a drug from the list" (middle left), and "Close this window" (bottom center). To the right of the first button is a text input field containing "Paracetamol". To the right of the second button is a dropdown menu currently showing "Valium".

You will also be able to modify the medication list of one patient, once again you will have to enter your password to access to this page.

A screenshot of a light blue interface for managing a patient's medication list. At the top, there is a "Patient" label, a dropdown menu showing "John Doe", and a "Refresh lists" button. Below this, there are three input fields: "Add a drug to the patient list" (button), "Tazorac" (dropdown), "0.5" (text), and "24" (text). A horizontal line separates this section from the next. Below the line, there is a "Remove a drug from the list" button and an empty dropdown menu. Another horizontal line follows. Below the second line, there is a "Modify a line" button, an empty dropdown menu, and two buttons labeled "Pills" and "Dosing times". At the bottom center is a "Close" button.

Of course, you will be able to disconnect.

Thank you for your trust and all the team hopes that your experience on our application will be smooth!
